Education

Northeastern University

Candidate for Bachelor of Science in Computer Science **GPA: 4.0/4.0**

May 2026

Boston, MA

Relevant Coursework

Object-Oriented Design, Algorithms and Data Structures, Computer Systems, Artificial Intelligence, Reinforcement Learning, Database Design, Foundations of Data Science

Northeastern Varsity Track & Field

Achieved 6th Place for Pole Vault at CAA Championships, contributed to Northeastern Athletics Team of the Year

Technical Skills

Languages: Java, Python, TypeScript/JavaScript, Terraform, Ansible, SQL, HTML/CSS

Tooling: AWS EC2, Azure (Front Door, Blob Storage, Key Vault), Docker, Jenkins, Kubernetes, Linux, Git

Frameworks: React, Spring, Apollo GraphQL, Tailwind, PyTorch, NextJS

Experience

Klaviyo

July 2025 – Dec 2025

Front-End Intern

Boston, MA

- Shipped a high-impact feature from design through general availability under tight deadlines, collaborating across design and engineering. The launch was rapidly adopted by customers representing \$2.4M in annual revenue.
- Implemented frontend support for custom user roles (read, export, edit), authored test plan uncovering 10+ edge cases and ensuring reliable role-based access across application pages.
- Resolved React rerender loops, checkout rendering issues, and CSS misalignments, improved UI with regular translation/i18n updates and component styling, reducing Sentry alerts by 50%.
- Trusted with PagerDuty rotation as an intern, resolved high-priority UI bugs, and contributed reusable components to shared library.

Wolters Kluwer

July 2024 – Dec 2024

DevOps Intern

Waltham, MA

- Migrated legacy CDN to a custom Azure solution. Utilized Terraform to build manageable infrastructure. Reduced costs by over 85% (\$11k/mo).
- Leveraged Python and Ansible to automate host management, develop audit scripts, and create a patch management tool across Windows and Linux hosts.
- Configured monitoring agents (Zabbix) and deployed them across inventory (50+ hosts), migrated alerts to Slack via webhooks, added triggers to detect issues such as unmounted file mounts or excessive CPU usage.
- Applied ArgoCD to automate application maintenance and redeploy apps w/ expiring secrets. Paired it with Jenkins to streamline Docker host rebuilds following PR merges, enhancing deployment efficiency and security compliance.

Khoury College of Computer Sciences

Jan 2024 – Apr 2025

Teaching Assistant for Fundamentals of Computer Science 2

Boston, MA

- Facilitated 4 office hours weekly to help students with course material, debugging, and design decisions.
- Graded homework and exams for 70 students in the accelerated section.
- Conducted weekly interactive lab sessions for a group of 30 students, fostering practical application.

Projects

TheFarm | *Next.js (with NextAuth), React, Tailwind CSS, Framer Motion, Docker, PostgreSQL, Python*

Oct 2024

- Developed a full-stack (MVP) farm management dashboard designed to track livestock. [Demo Video](#)
- Designed highly interactive and extensible UI components using React, Framer Motion, and Tailwind CSS, integrating seamlessly with backend systems.
- Integrated frontend and backend with Next.js and NextAuth, creating a secure and convenient authentication experience using JWTs.
- Containerized a PostgreSQL server with Docker, leveraging SQL queries and actions to generate mock data and rigorously test application functionality.

Blockstart | *Java, JS, HTML/CSS, React w/TS, Spring, Git, AWS*

Jun 2023

- Created a full-stack web app to streamline the college track and field recruitment search process.
- Developed a service for scraping data from two separate track and field databases (1000+ colleges) to build a recruiting profile for each college in the NCAA, stored in a Spring Boot server.
- Co-designed front-end with React/MUI alongside a teammate.
- Deployed app on AWS EC2 and mapped custom domain using Route 53 to blockstart.net
