Education

Northeastern University

Candidate for Bachelor of Science in Computer Science **GPA: 4.0/4.0**

May 2026

Boston, MA

Relevant Coursework

Object-Oriented Design, Algorithms and Data Structures, Computer Systems, Artificial Intelligence, Machine Learning, NLP, Reinforcement Learning, Database Design, Foundations of Data Science

Northeastern Varsity Track & Field

Achieved 6th Place for Pole Vault at CAA Championships, contributed to Northeastern Athletics Team of the Year

Technical Skills

Languages: Java, Python, Terraform, Ansible, SQL, TypeScript/JavaScript, HTML/CSS

Developer Tools: Linux, Git, Azure, AWS, Docker, Jenkins, Kubernetes, VS Code, IntelliJ Idea, DataGrip

Frameworks: React, NextJS, Flask, PyTorch, Tailwind, framer-motion, Spring

Experience

Wolters Kluwer

July 2024 – Dec 2024

DevOps Intern

Waltham, MA

- Migrated legacy CDN to a custom Azure solution. Utilized Terraform to build manageable infrastructure. Reduced costs by over 85% (\$11k/mo).
- Leveraged Python and Ansible to automate host management, develop audit scripts, and create a patch management tool across Windows and Linux hosts.
- Configured monitoring agents (Zabbix) and deployed them across inventory, migrated alerts to Slack via webhooks, added triggers to detect issues such as unmounted filemounts or excessive CPU usage.
- Applied ArgoCD to automate application maintenance and redeploy apps w/ expiring secrets. Paired it with Jenkins to streamline Docker host rebuilds following PR merges, enhancing deployment efficiency and security compliance.

Khoury College of Computer Sciences

Jan 2024 – Apr 2025

Teaching Assistant for Fundamentals of Computer Science 2

Boston, MA

- Facilitated 4 office hours weekly to help students with course material, debugging, and design decisions.
- Graded homework and exams for 70 students in the accelerated section.
- Conducted weekly interactive lab sessions for a group of 30 students, fostering practical application.

Create & Learn

Jul 2023 – Aug 2023

Front End Development Intern

Palo Alto, CA

- Increased customer service agent efficiency by 20% through developing an intuitive user interface w/ React.
- Developed a blog generation assistance tool for search engine optimization, specifically focusing on “Top 10” style blogs.
- Leveraged OpenAI’s API to develop an automated email generation tool, empowering our customer service agents to efficiently handle tickets with a personal touch and improved efficiency.

Projects

TheFarm | *Next.js (with NextAuth), React, Tailwind CSS, Framer Motion, Docker, PostgreSQL, Python*

Oct 2024

- Developed a full-stack (MVP) farm management dashboard designed to track livestock. [Demo Video](#)
- Designed highly interactive and extensible UI components using React, Framer Motion, and Tailwind CSS, integrating seamlessly with backend systems.
- Integrated frontend and backend with Next.js and NextAuth, creating a secure and convenient authentication experience using JWTs.
- Containerized a PostgreSQL server with Docker, leveraging SQL queries and actions to generate mock data and rigorously test application functionality.

Blockstart | *Java, JS, HTML/CSS, React w/TS, Spring, Git, AWS*

Jun 2023

- Created a full-stack web app to streamline search process in the college track and field recruitment process.
- Developed a service for scraping data from two separate track and field databases to build a recruiting profile for each college in the NCAA, stored in a SpringBoot server.
- Designed a front-end utilizing React/MUI with a roommate to allow users to seamlessly interact with the server.
- Used an AWS ec2 instance to deploy the app and used Route 53 to map to our custom domain blockstart.net
